

Stop hunting for stellar tone

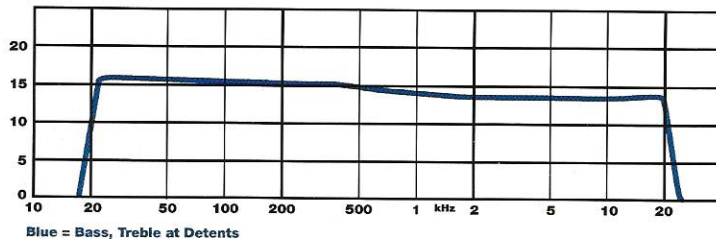

Set neck construction gives the Orion warm, well-defined midrange response. The cross-grained maple neck is supported by two dual truss rods that adjust at the body. Topped off with a durable ebony fingerboard, the neck has a comfortable shape and complete access to upper frets.

The electronics cavity is shielded with a silver conductive paint that lasts the life of the bass without flaking or breakdown. Pickups and electronics modules hook up with solderless, gold-plated, friction-locked connectors. The construction, control, and sheer playability of the Orion combine to create an instrument that responds instantly to its player.

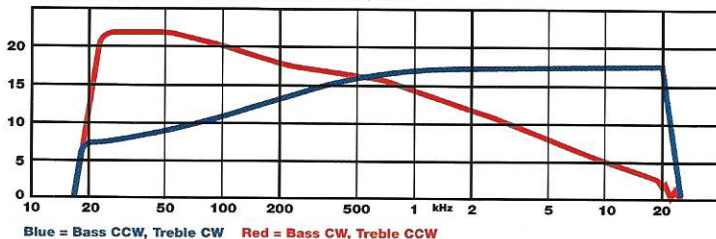

Polyurethane makes the Orion shine. It looks like fine hand-rubbed oil, yet has none of the care problems associated with oil finishes. We keep it thin enough for you to enjoy the tactile pleasure of each different species of wood.

Our design goal for the Orion was to create a set-neck version of our popular Europa bass. While affordability is a consideration, there are no shortcuts here and the Orion is every bit as overbuilt as the rest of our basses.
